To whom it may concern,

Presently, I am pursuing an internship to help advance my education and career opportunities in Computer Science and engineering. My background as a college student has allowed me to gain a solid foundation in computer science fundamentals, which are C++, Arm Assembly Language, software engineering principles, and data structures. I am sure that I will be able to use the knowledge that I have learned from school and help add to your organization.

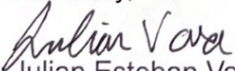

In addition to my academic achievements, I have applied the knowledge I gained from school to several hands-on projects that have helped me develop my communication skills and programming skills. I developed and created a classic Tic Tac Toe game using C++. This project challenged me to apply algorithmic thinking and implement data structures to create an engaging game. I also collaborated with local businesses such as "Angel's Complete Janitorial Services" and developed a professional website. Currently, I am developing a professional website for a local politician. I created user-friendly and informative websites. This experience allowed me to use and develop more of my web development skills to help meet the client's needs.

During the last two summers, I have been an integral part of the teaching team at Morgan Elementary in Rialto. I mentor and train students in various coding and electronic projects. I have led workshops that taught students how to code music on Arduino, solder components onto circuit boards, and utilize sound wave sensors to activate music from the speakers. I have also taught students how to play the drums. I combined my love for music and the desire to educate.

It has been through a combination of successful projects and educational experiences that I am able to offer organizational and instructional leadership skills to emphasize the positive, streamline the routine, and direct energy and resources to projects that I work on. I have been privileged to work with students and companies.

It will be a pleasure to meet with you in the near future to discuss how my education, experience and commitment can be helpful. From a personal view, I am enthusiastic, diligent, seeking challenges, and fully prepared to take on this new chapter in my life.

Sincerely,

Julian Esteban Vara
